

Dear Killgore Research Committee Members,

I strongly support this proposal and Mr. Benjamin Mosley's efforts to digitize our geology teaching collection and create an accessible online lending library. This project addresses a critical regional need—K-12 teachers throughout the Texas Panhandle regularly contact our department seeking quality geological specimens for classroom instruction, but our current system lacks efficient showcase and coordination capabilities.

The proposed digital platform will transform our underutilized collection into a dynamic educational resource, directly supporting WTAMU's mission of regional service while enhancing STEM education opportunities. Benjamin will gain invaluable experience in digital database management, scientific photography, and web development—skills increasingly vital in modern scientific and data management careers.

I am fully committed to providing comprehensive mentorship throughout this project, including weekly progress meetings and hands-on training in specimen identification and documentation techniques. The 200-hour timeline and proposed methodology are entirely realistic given our available resources and departmental support infrastructure.

This project establishes excellent groundwork for future external funding opportunities while creating lasting educational impact across our region.

Respectfully,

Dr. Carla Eichler
